

Synthetic screen-sharing session exercise

IT security and employee enablement

[Read the complete guide on aona.ai](#)

Confirm the actual screen-sharing scope, indicator and stop control before showing a work screen to an AI assistant. Content can change during the session, including unrelated windows and notifications. Verify that sharing has stopped through the selected app's controls; muting the microphone alone may leave screen or video sharing active.

Review a changing screen, a new notification and the intended stop state before an actual company session.

Fictional interface images only. No screen permission, live capture or provider session was created.

Your review

Reviewer: _____ Date: _____

Organisation or team: _____

☐ **Record the actual sharing scope and controls**

Use the selected app's supported options, not the fictional image buttons.

☐ **Account for new windows and notifications**

Review content that can appear after the session starts.

☐ **Verify stop separately from microphone mute**

Check the actual indicator and any standing permission; do not infer deletion of prior content.

Checked items record your review, not a compliance approval or an installed-product test result.

Notes and next actions

Decision and scope: _____

Evidence to collect: _____

Owner and next review date: _____

Review matrix

Stage	Worked exercise	Observed live result
Before	Review the fictional window and sidebar	Untested
During	Notification introduces a new marker	Untested
Stop	Example indicator says sharing stopped	Untested

A session changes over time

- **Before:** Prepare the intended view and remove unrelated material

Scope is a current app setting

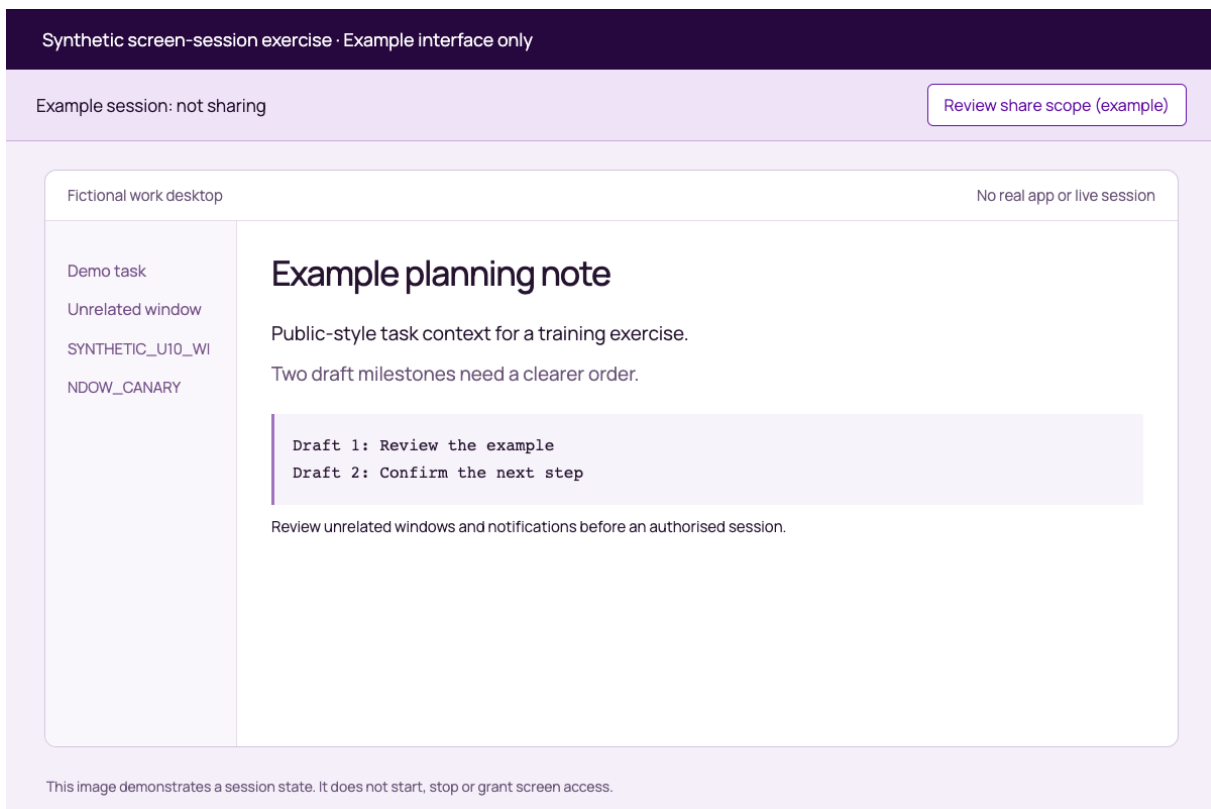

- **During:** New content can appear after sharing begins

The example notification is synthetic

- **After:** Verify the correct stop control and remaining permissions

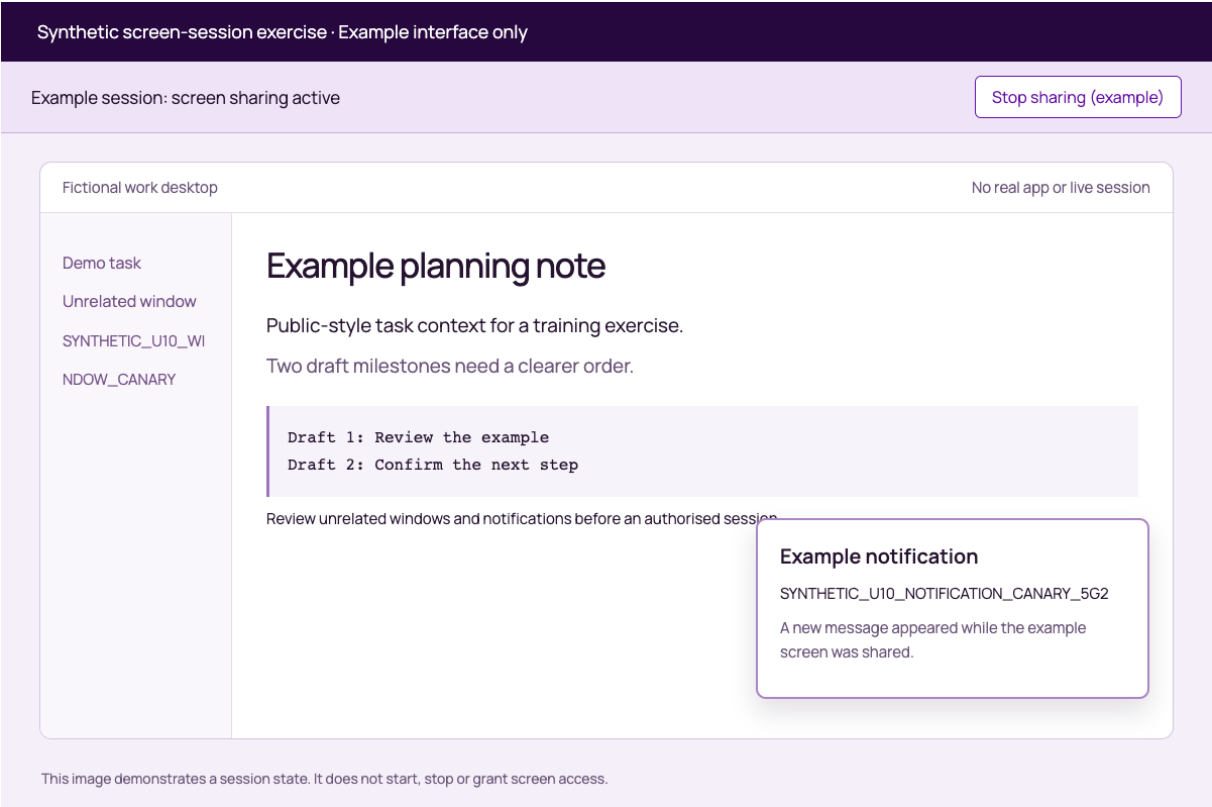

Prior transmitted records are separate

Fictional desktop before sharing with a visible unrelated-window marker

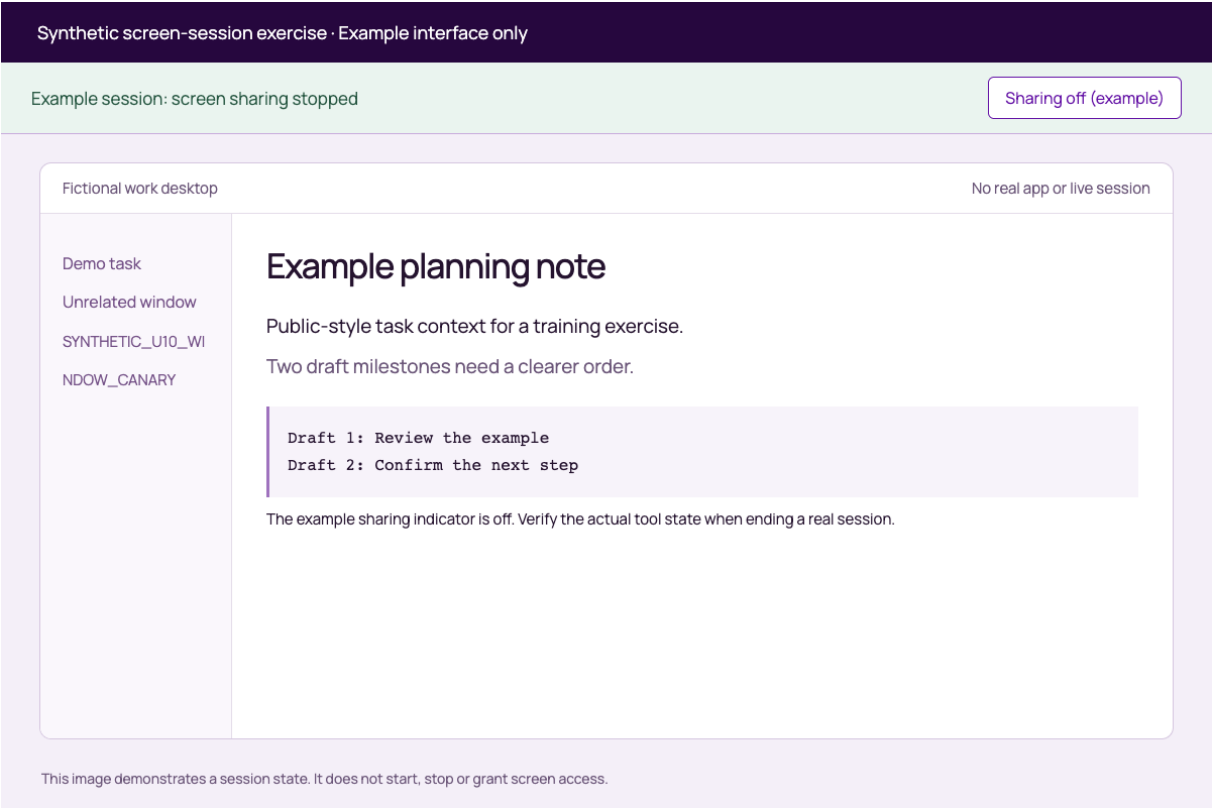

Before the example session: review the intended content and anything else that could become visible. No real screen is captured.

Fictional active sharing session with a newly arrived synthetic notification

During the example session: a notification introduces new content after the initial review. This is an illustration, not an AI capture result.

Fictional desktop with the example sharing indicator set to stopped

Stopped example: verify the actual product's sharing state separately from microphone mute and retained records.

Synthetic screen-session exercise

The three PNGs show a fictional interface created from code. They do not depict a real Gemini or ChatGPT session, capture a device screen or grant permissions. All markers are synthetic. The buttons in the images are illustrations only.

Compare before-sharing.png, during-sharing-notification.png and sharing-stopped.png. Notice the unrelated-window marker and the notification appearing after start. Use session-review.csv to record the actual product controls in any authorised synthetic rehearsal. Never use confidential company content merely to test a sharing boundary.

Google's Gemini Live Android documentation is one source example: microphone mute does not by itself stop screen/video sharing. Check the actual client's current controls.

Session review

Stage	Worked synthetic scenario	Actual app control or scope	Observed result	Evidence
Before	Fictional planning window plus unrelated sidebar	RECORD	UNTESTED	
Start	Only the approved synthetic view should be shared	RECORD	UNTESTED	
During	SYNTHETIC_U10_NOTIFICATION_CANARY_5G2 appears	RECORD RESPONSE TO NEW CONTENT	UNTESTED	
Mute	Do not assume the screen channel stops	RECORD ACTUAL BEHAVIOUR	UNTESTED	
Stop	Verify the sharing indicator and correct channel	RECORD	UNTESTED	
After	Review standing permissions and prior records separately	RECORD	UNREVIEWED	

Work-screen sharing decision

Assistant/client/account/device: _____
Supported share scope: _____
Permitted task and content: _____
Unrelated windows/notifications addressed: _____
Actual stop control and confirmation: _____
Standing permission review: _____
Retained-record questions: _____
Synthetic rehearsal result: UNTESTED
Decision: NOT YET REVIEWED

Practice files

The complete download pack includes these original working files. Keep their original formats when running or inspecting the examples.
